

Is collecting RoHS or REACH declarations costing your company more to execute than other companies?

Your products may be ready today for July 22nd or are already in scope, but this status must be maintained. Many companies will be replacing about a third of their declarations annually for; obsolesce, new technology, cost reductions, supplier changes, and needed declaration updates. What is your cost to acquire an accepted declaration? Would you be willing to share that with the group? It is useful to know where your costs are relative to others, and if they are going up or down, relative to internal actions. Just total the June declaration collection costs (with all overheads), and divide by the June accepted quantity. How do your costs compare to others?
